Master of Arts (MA)

Department
Modern Languages and Literatures
Abstract
There is a great deal of linguistic variety in the Spanish that is spoken throughout the world. Differences such as the use of vosotros, voseo, and seseo, are steadily employed in some areas, while other people groups express themselves in a totally different manner. Because such a wide range of linguistic nuances exist, textbook authors are faced with the difficult task of choosing which elements to include and which to exclude from their writings. In this study, I have examined 17 different beginning level textbooks for college students of Spanish with a particular focus on the teaching of elements: forms of address, pronunciation of the language, and such as direct object pronouns. I found that while some texts attempt to include linguistic variety, most tend to favor a more Castilian Spanish yet a somewhat neutralized grammatical form and pronunciation.
