GPCRDB information system for G protein-coupled receptors.

Florence Horn, Emmanuel Bettler, Laerte Oliveira, Fabien Campagne, Fred E. Cohen, Gerrit Vriend

Published: 01 January 2003
The GPCRDB is a molecular class-specific information system that collects, combines, validates and disseminates heterogeneous data on G protein-coupled receptors (GPCRs). The database stores data on sequences, ligand binding constants and mutations. The system also provides computationally derived data such as sequence alignments, homology models, and a series of query and visualization tools. The GPCRDB is updated automatically once every 4–5 months and is freely accessible at http://www.gpcr.org/7tm/.
