Abstract

Bringing together leading scholars in the fields of criminology, international law, philosophy and architectural theory, this book examines the interrelationships between architecture and justice, highlighting the provocative and curiously ambiguous juncture between the two. Illustrated by a range of disparate and diverse case studies, it draws out the formal language of justice, and extends the effects that architecture has on both the place of, and the individual and its multi-disciplinary perspective, the study serves as a platform on which to debate the relationships between the ceremonial, legalistic, administrative and penal aspects of justice, and the spaces that constitute their settings. The study develops from the particular to the universal, from local situations to the larger city, and thereby examines the role that architecture and urban space play in the deliberations of justice. At the same time, contributors to the volume remind us of the potential impact the built environment can have in undermining the proper juridical processes of a socio-political system. Hence, the book provides both wise counsel and warnings of the role of public/civic space in affirming or just society.
