Garden cities 21: creating a livable urban environment.

Author(s): Simonds, J. O.

Abstract: The book presents a positive approach to the creative evolution of the American city, offering practical and proven ideas on how to transform ailing cities where crime, overcrowding, poverty, traffic problems and pollution are in full display, into thriving, livable, urban and regional centres. Viewing the city as an organic entity, the book analyses each individual component and provides a conceptual model that reconnected its scattered elements into an efficient, more self-sustaining, 'garden-park' prototype. The emphasis is on urban regeneration, the development of thr
centres, cohesive communities, resource management, open space planning, parks that allow a city to breathe and improve the quality of life, and new systems. The proposed model portends a vastly superior city for the 21st century. Contributions to the model and innovative solutions are offered by landscape architects and urban designers.
