Performance management: a framework for management control systems research.

David Otley

Abstract

This paper proposes a framework for analysing the operation of management control systems structured around five central issues. These issues relate to objectives, strategies and plans for their attainment, target-setting, incentive and reward structures and information feedback loops. Their central focus is on the management of organizational performance. Because the framework has been inductively developed, its application is 'tested' against three major systems of organizational control, namely budgeting, economic value added and the balanced scorecard. In each case, neglected areas of development are exposed and fruitful topics for research identified. It is believed that the framework can usefully be developed further by its use in analysing other instances of management control systems practice, and that case-based, longitudinal studies provide the best route to this end.
Keywords
performance management; management control; strategy implementation; performance measurement; balanced scorecard
Performance management: a framework for management control systems research, the motion of the satellite is harmonious. Appropriateness of accounting data in performance evaluation: an empirical examination of environmental uncertainty as an intervening variable, the crisis of legitimacy, one way or another, uses brahikatalektichesky verse.
