Protocell architecture: architectural design

Full text not available from this repository.

Abstract

Throughout the ages architects have attempted to capture the essence of living systems as design inspiration. However, practitioners of the built environment have had to deal with a fundamental split between the artificial urban landscape and nature owing to a technological 'gap' that means architects have been unable to make effective use of biological systems in urban environments. Protocell Architecture is an edition of AD that shows for the first time that contemporary architects can create and construct architectures that are bottom up, synthetically biological, green and have no recourse to shallow bio-mimicry. In the next few decades, synthetic biology is set to have as much, if not more, impact on architecture as cyberspace and the digital. The key to these amazing architectural innovations is the Protocell.

Item Type: Edited Book

[1] Neil Spiller and Rachel Armstrong were guest editors of 'Protocell architecture: architectural design', published March 2011 (ISBN: 978-0-470-74828-2). [2] In addition, Neil Spiller and Rachel Armstrong also contributed the following chapters: 'It's a Brand New Morning' (co-authored with Rachel Armstrong); 'Protocells: The Universal Solvent' (Neil Spiller); and 'How Protocells Can Make 'Stuff' Much More

Keywords: synthetic, protocell, architecture, design

Subjects: N Fine Arts > NA Architecture
Q Science > Q Science (General)
T Technology > TH Building construction

Pre-2014 Departments: School of Architecture, Design & Construction
