Abstract : The progress in rice production in Bangladesh during the last 20 years is described and the prospects until 2010 are examined. Lagging districts and high rice productivity are identified and public policies pertaining to rice production are reviewed. Total factor productivity of rice is determined and the effects of market liberalization are assessed. It is shown that the achievements have been significant but...
uneven, with robust progress in the north-western districts and a nearly stagnating situation in north-eastern, central, low lying, and coastal districts of the country. Progress has mainly been based on seed-fertilizer-irrigation technology. It is expected to continue to play a dominant role in the agricultural economy. Declining population growth and a continuation of technological diffusion may give Bangladesh an exportable surplus by 2010. Recommendations for policy and institutional changes are provided.
