Liberian letters and Virginian narratives: Negation patterns in two new sources of earlier African American English

Alexander Kautzsch

Tables

This article introduces two formerly unanalyzed sources of earlier African American English (AAE) to the historical study of this variety. The first source is nineteenth-century letters written by former slaves who had been sent to Liberia. The second set of data is part of a collection of ex-slave narratives from Virginia that are not included in the ex-slave narratives in Rawick (1972), which have already been analyzed linguistically.

In part 1 I briefly characterize the two data sets and their historical backgrounds. In part 2 I analyze negation patterns in the data, and in part 3 I argue that the differences in negation patterns that surface in these two sets of data result to a high degree from the effects of literacy on some features of nonstandard grammar in written documents.

1. Sociohistorical Background

LIBERIAN LETTERS. The Liberian letters are drawn from two collections of ex_slave letters from the nineteenth century: Wiley (1980) contains letters written by a wide range of former slaves who were repatriated to Liberia; Miller (1978) provides all extant letters of a "slave family" whose members were separated during emigration to Liberia when some of them went to Africa and the rest stayed in the United States.

In the United States, the idea of repatriating freed slaves to Liberia was initiated by the American Colonization Society (ACS), which had been founded in 1817 and sought to "establish an independent settlement" for African Americans in West Africa (cf. Barbag 1977, 104). The first colonists were sent out in 1820 and established their first settlement in 1822.

Originally, the ACS had seen Liberia as a settlement for educated African Americans (Singler 1989, 40), but this target group was not very [End Page 34] willing to leave the United States. First, abolitionists tried to prevent freed slaves from emigrating because financial support for Liberia came in large part from Southern slave owners, who regarded freed African Americans and emancipation as a whole as a threat to their power and property. Second, the land in West Africa was quite difficult to settle, and the mortality rate during the passage was "shockingly high" (Shick 1980, 27). Last, the African Americans themselves were reluctant to leave the country which they had come to regard as their own (Barbag 1977, 104). Thus, it soon turned out that the bulk of emigrants were illiterate ex_slaves directly from plantations (Singler 1977, 79; 1991, 250). Nevertheless, there was a settler elite, whose members saw themselves as the leading caste of settler society and who remained in power until 1980 (Singler 1984, 42-43).

The language the settlers brought with them was probably a sort of nineteenth-century Black English that ranged from highly vernacular, spoken by those who came directly from plantations, to essentially standard English, spoken by the settler elite. As only 5-10% of the slave population as a whole was literate (Corne lius 1991), the letters published in Wiley (1980) and Miller (1978) are more likely to reflect settler elite speech than plantation speech.

Manuscript Letters as Linguistic Data. The use of written documents to reconstruct colloquial English must be...
guided by caution. However, previous studies (e.g., Montgomery, Fuller, and DeMarse 1993; Montgomery and Fuller 1996; Montgomery 1999) show that the analysis of manuscript documents can be fruitful to understanding earlier stages of AAE. Montgomery (1999, 1) especially "develops a case for the principled use of manuscript documents for reconstructing earlier stages of colloquial English." In order to do so, he identifies four issues that have to be taken into account when working with linguistic data of this kind: (1) authorship; (2) use of models; (3) manipulation of written code; and (4) representativeness.

The first issue is "whether such documents actually came from the hands of African Americans" (Montgomery 1999, 23). In the case of the Liberian letters, authorship...
