To judge a book by its weight you need to know its content: Knowledge moderates the use of embodied cues.

Abstract

Participants evaluated a book as more important when it weighed heavily in their hands (due to a concealed weight), but only when they had substantive knowledge about the book. Those who had read a synopsis (Study 1), had read the book (Study 2) and knew details about its plot (Study 3) were influenced by its weight, whereas those unfamiliar with the book were not. This contradicts the widely shared assumption that metaphorically related perceptual inputs serve as heuristic cues that people primarily use in the absence of more diagnostic information. Instead, perceptual inputs may increase the accessibility of metaphorically congruent knowledge or may suggest an initial hypothesis that is only endorsed when supporting information is accessible.
Highlights

â–º In 3 studies people evaluate targets containing concealed weights as more important. â–º This effect only occurs when people have knowledge about the target. â–º This occurs for individual difference and randomly assigned levels of knowledge. â–º The influence of objective knowledge remains, controlling for subjective knowledge. â–º This finding contradicts widely held intuitions about how embodied cues function.
