Reassessing authorship of the Book of Mormon using delta and nearest shrunken centroid classification.

Matthew L. Jockers, Daniela M. Witten, Craig S. Criddle

**Published:** 06 December 2008
Mormon prophet Joseph Smith (1805–44) claimed that more than two-dozen ancient individuals (Nephi, Mormon, Alma, etc.) living from around 2200 BC to 421 AD authored the *Book of Mormon* (1830), and that he translated their inscriptions into English. Later researchers who analyzed selections from the *Book of Mormon* concluded that differences between selections supported Smith's claim of multiple authorship and ancient origins. We offer a new approach that employs two classification techniques: ‘delta’ commonly used to determine probable authorship and ‘nearest shrunken centroid’ (NSC), a more generally applicable classifier. We use both methods to determine, on a chapter-by-chapter basis, the probability that each of seven potential authors wrote or contributed to the *Book of Mormon*. Five of the seven have known or alleged connections to the *Book of Mormon*, two do not, and were added as controls based on their thematic, linguistic, and historical similarity to the *Book of Mormon*. Our results indicate that likely nineteenth century contributors were Solomon Spalding, a writer of historical fantasies; Sidney Rigdon, an eloquent but perhaps unstable preacher; and Oliver Cowdery, a schoolteacher with editing experience. Our findings support the hypothesis that Rigdon was the main architect of the *Book of Mormon* and are consistent with historical evidence suggesting that he fabricated the book by adding theology to the unpublished writings of Spalding (then deceased).
