Metabolic and endocrine physiology. An introductory text.

Author(s): TEPPERMAN, J.

Book: Metabolic and endocrine physiology. An introductory text. 1968 No.Edn 2

Abstract: It is no doubt a confession of failure of some kind to say that the this book was not seen and reviewed by Nutrition Abstracts and Reviews. T no doubt that it has an important place in the literature of nutrition and nutri rejoice to have the studies it describes referred to as physiological and nei biochemical nor endocrinological. I rejoice in the all too short historical summ happy to say that I have seldom read a textbook with more enjoyment. I do whether specialist biochemists or endocrinologists will find anything to critic
found nothing in the passages relating to the physiological processes with which I am best acquainted. The style is clear, simple and always intelligible. Occasional flashes light up a passage, such as the description of the remodelling of bone as "business-as-usual during alterations". The author is deliberately selective and not afraid to say he does not know. The student who reads it should not omit to read both introductions. I hope he will find the rest as rewarding as I have done. I. Leitch.
